

# Egg Case Hunt & ID

## Beach Collection

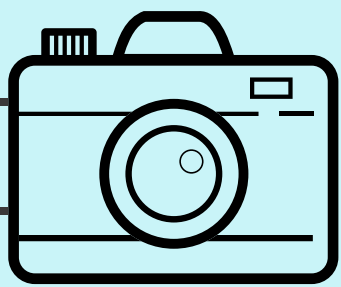

Walk along a beach and collect egg cases. These are usually found on the upper shoreline.

## Soak Egg Cases

Soak the egg cases in a bucket of water overnight. This stops them from drying out and helps with identification!

## Measure & Photograph

Take a picture of each egg case along a ruler, and record egg case length. If you don't have a ruler use a reference in your photo like a coin.

## Species Identification

Use a Species ID to help identify your egg cases and record your results on our website!
